## OPEN SEA ISO 9650 (4, 6, 8 and 10 persons)

### Model Overview:

The ISO 9650 standard is intended to improve and harmonise design standards for Liferafts. It distinguishes 2 categories of rafts: "Type 1" for ocean navigation and "Type 2" for coastal navigation (the ISO 9650 standard does not impose any limit between coastal and open sea sailing).

Open Sea ISO 9650 rafts belong to the **Type 1** category, ie they are designed for sailing on the open sea, and are thus adapted to the risks incurred on long voyages (high winds and heavy seas). They are available in **Group A**: rafts designed to inflate correctly at an ambient air temperature of between -15°C and 65°C.

The Open Sea ISO 9650 rafts are produced with equipment for less than or more than 24 hours. In order to meet the needs of your sailing programme (long distances, trips, etc.), the under-24 hours version can be transformed with the greatest of ease into the over-24 hours version with the addition of a grab bag. Buoyant and watertight, it contains the supplementary equipment necessary when you have to wait longer to be rescued, and is equipped with an attachment system for increased safety.
